BONUS 2

Anti-Sagging Protocol

Workouts focused on firming your arms, belly and legs alongside the challenge.

WALL PILATES · 21-DAY CHALLENGE

What sagging is and what really works

"Loose" skin on your arms, belly and thighs usually has two main causes: **too little muscle** under the skin and **excess fat** in that area. Creams help your skin, but what truly firms you up is muscle. That's why this protocol focuses on strength, using your own body weight.

- **Strength training 3 to 4 times a week** stimulates muscle to grow and get firmer.
- **Protein at every meal** gives that muscle its building blocks (see Bonus 4).
- **Water and sleep** help your skin and recovery.
- **Consistency:** the first signs show up in 3 to 4 weeks; visible change in 8 to 12.

How to fit it into the 21-Day Challenge

Do one of the workouts below on challenge rest days or right after that day's workout, if you have the energy. Never train the same muscle group hard two days in a row.

Workout A — Firm arms and back

3 rounds · 30 s rest between exercises

1	Wall push-up	12 reps
2	Wall angels	10 reps
3	Incline wall plank	30 seconds
4	Standing chest opener (wall swan)	10 reps

To make it harder, move your feet further from the wall in the push-up and plank.

Workout B — A firmer belly

3 rounds · 20 s rest

1	Dead bug pressing into the wall	10 reps (5 per side)
2	Alternating toe taps (feet on the wall)	12 reps
3	Prep hundred with feet on the wall	50 arm pumps
4	Incline side plank on the wall	20 seconds per side

Workout C — Legs and glutes

3 rounds · 30 s rest

1	Bridge with feet on the wall	15 reps
2	Wall sit	30 to 45 seconds
3	Wall-supported split squat	10 per side
4	Standing hip abduction at the wall	12 per side
5	Clamshell with feet on the wall	15 per side

Sample week

Day	Workout	Duration
Monday	Workout A (arms)	12–15 min
Tuesday	Workout C (legs and glutes)	15 min
Wednesday	21-Day Challenge only / active rest	—
Thursday	Workout B (belly)	12 min
Friday	Workout C (legs and glutes)	15 min
Saturday	Workout A + B (2-round version)	20 min
Sunday	Rest, easy walk and stretching	—

How to progress each week

1. Week 1: learn the moves with 2 rounds.
2. Week 2: do 3 full rounds.
3. Week 3: add 2 to 4 reps or 10 seconds to each exercise.
4. Week 4: cut rest to 20 seconds or slow the moves down (3 s on the way down).

The exercises, step by step

Wall push-up

Chest | Triceps | Front deltoid | Core

Position: Facing the wall, an arm's length away, hands at shoulder height and width.

1. Form a straight line from head to heels, abs engaged.
2. Bend your elbows, bringing your chest toward the wall, elbows about 45° from your body.
3. Push the wall away to come back.

Breathing: Inhale as you lower in, exhale as you push.

Avoid: Poking your head forward. Letting your hips stick out back.

Easier version: Move your feet closer to the wall.

Safety: Keep your wrists in line with your elbows.

Pain or limitations in your wrists? Swap for: Incline wall plank.

Wall angels

Middle and lower trapezius | Rhomboids | Chest (stretch)

Position: Standing, back against the wall, feet one step forward, knees slightly bent.

1. Press your hips, back and, if possible, your head against the wall.
2. Bend your elbows to 90° with your arms and backs of your hands on the wall, making a "W".
3. Slide your arms up without losing contact with the wall.
4. Slide back down to the "W", squeezing your shoulder blades together.

Breathing: Inhale as your arms go up, exhale as they come down.

Avoid: Arching your lower back to keep your arms on the wall. Shrugging your shoulders toward your ears.

Easier version: Move your arms a few inches off the wall and reduce the range.

Safety: Stop if you feel tingling in your arms or shoulder pain.

Pain or limitations in your shoulders? Swap for: Wall chest stretch.

Incline wall plank

Transverse abdominis | Rectus abdominis | Shoulders | Glutes

Position: Forearms on the wall at shoulder height, feet away from it.

1. Walk your feet back until your body forms an inclined line.
2. Elbows under shoulders, abs tight and glutes engaged.
3. Hold the position without letting your lower back sag.

Breathing: Steady lateral breathing; don't hold your breath.

Avoid: Hips too high. Shrugged shoulders.

Easier version: Move your feet closer to the wall so you're more upright.

Safety: If you feel it in your lower back, move your feet closer and brace your abs.

Standing chest opener (wall swan)

Spinal extensors | Chest (stretch) | Shoulders

Position: Facing the wall, hands on it at chest height, one step back.

1. Slide your hands up the wall.
2. Gently bring your chest toward the wall, opening your upper back.
3. Come back by sliding your hands down.

Breathing: Inhale as you open, exhale as you return.

Avoid: Bending only at your lower back. Throwing your head back.

Easier version: Keep your hands lower.

Safety: The opening comes from your mid-back; your abs protect your lower back.

Dead bug pressing into the wall

Transverse abdominis | Rectus abdominis | Obliques

Position: Lying on your back, top of your head an arm's length from the wall, arms reaching back with hands pressing the wall, knees bent over your hips.

1. Press the wall with your hands to engage your abs and flatten your lower back to the floor.
2. Extend one leg forward, close to the floor, without lifting your lower back off the mat.
3. Bring your knee back over your hip and alternate legs.

Breathing: Exhale as you extend your leg, inhale as you bring it back.

Avoid: Lower back lifting off the floor. Releasing the pressure of your hands on the wall.

Easier version: Instead of extending your leg, just tap your foot to the floor with your knee bent.

Safety: Stop if your lower back arches; reduce the range.

Alternating toe taps (feet on the wall)

Lower abs | Hip flexors

Position: Lying down, knees at 90° and feet on the wall.

1. Slightly tuck your pelvis, keeping your lower back stable.
2. Take one foot off the wall and tap it to the floor, keeping your knee bent.
3. Return your foot to the wall and alternate.

Breathing: Exhale as your foot lowers, inhale as you bring it back.

Avoid: Arching your lower back as your foot lowers. Moving too fast.

Easier version: Only lower your foot halfway.

Safety: Your torso stays still; only your leg moves.

Prep hundred with feet on the wall

Rectus abdominis | Transverse abdominis | Neck flexors

Position: Lying down, knees at 90° and feet on the wall, arms by your sides.

1. Exhale and lift your head and shoulders, looking at your knees.
2. Lift your arms a few inches off the floor.
3. Make small pumping movements with your arms, up and down.
4. Lower your head at the end, without rushing.

Breathing: Inhale for 5 pumps, exhale for 5 pumps.

Avoid: Pulling on your neck. Lifting your lower back off the floor.

Easier version: Keep your head on the floor and only do the arm pumps.

Safety: If your neck feels uncomfortable, rest your head and keep going with your arms.

Pain or limitations in your neck? Swap for: Pelvic tilt with feet on the wall.

Incline side plank on the wall

Obliques | Quadratus lumborum | Gluteus medius | Shoulders

Position: Sideways to the wall, forearm on it at shoulder height, feet away from the wall.

1. Elbow under shoulder, body leaning in a straight line.
2. Lift your hip sideways, away from the wall.
3. Hold the position. Then switch sides.

Breathing: Breathe steadily throughout the hold.

Avoid: Letting your hip drop toward the wall. Sinking into your shoulder.

Easier version: Move your feet closer to the wall.

Safety: Stop if you feel pain in your supporting shoulder.

Pain or limitations in your shoulders? Swap for: Clamshell with feet on the wall.

Bridge with feet on the wall

Gluteus maximus | Hamstrings | Abs

Position: Lying on your back, knees bent at 90°, feet on the wall hip-width apart.

1. Arms by your sides, palms down.
2. Press your feet into the wall and lift your hips until you form a line from shoulders to knees.
3. Hold for a second at the top, squeezing your glutes.
4. Lower down one vertebra at a time.

Breathing: Exhale as you lift, inhale as you lower.

Avoid: Arching your lower back at the top. Letting your knees drift apart.

Easier version: Lift only halfway and lower slowly.

Safety: Your weight stays on your shoulders, never on your neck.

Wall sit

Quadriceps | Glutes | Abs

Position: Back against the wall, feet forward and hip-width apart.

1. Slide your back down the wall until your knees are between 45° and 90°.
2. Knees in line with your second toe, not going far past your toes.
3. Hold the position with your whole back on the wall.
4. To come out, slide up slowly.

Breathing: Breathe steadily throughout the hold.

Avoid: Knees caving in. Resting your hands on your thighs.

Easier version: Go down less: a 30° to 45° angle already works well.

Safety: Stop if you feel pain in the front of your knee.

Pain or limitations in your knees? Swap for: Bridge with feet on the wall.

Wall-supported split squat

Quadriceps | Glutes | Hamstrings

Position: Sideways to the wall, one hand on it, legs in a split stance (one forward, one back).

1. Torso upright, back heel lifted.
2. Lower by bending both knees, as if your back knee were going to touch the floor.
3. Push through your front foot to come up. Then switch sides.

Breathing: Inhale as you lower, exhale as you rise.

Avoid: Front knee caving in. Leaning your torso forward.

Easier version: Only lower a few inches.

Safety: Your front knee tracks in the direction of your foot.

Pain or limitations in your knees? Swap for: Standing hip extension at the wall.

Standing hip abduction at the wall

Gluteus medius | Gluteus minimus | Hip stabilizers

Position: Standing sideways to the wall, supporting hand on it.

1. Lengthen your spine and keep your hips facing forward.
2. Lift your outer leg out to the side, foot pointing forward.
3. Lower without touching the floor and repeat. Then switch sides.

Breathing: Exhale as you lift your leg.

Avoid: Leaning your torso to the opposite side. Turning your foot upward.

Easier version: Lift less and touch your foot to the floor between reps.

Safety: The range is small: about 12 to 16 inches is plenty.

Clamshell with feet on the wall

Gluteus medius | Hip rotators

Position: Lying on your side, back and hips aligned, knees bent and feet resting on the wall.

1. Rest your head on your bottom arm.
2. Keeping your feet together and on the wall, open your top knee like a clamshell.
3. Close slowly. Then switch sides.

Breathing: Exhale as you open, inhale as you close.

Avoid: Rolling your hips back. Taking your feet off the wall.

Easier version: Open your knee less.

Safety: Keep your hips stacked, one on top of the other, the whole time.

Habits that speed up results

- Include a protein source (eggs, chicken, fish, Greek yogurt, beans, cheese) at every meal.
- Drink water throughout the day: a good rule of thumb is half your body weight (in lbs) in ounces.
- Sleep 7 to 8 hours: muscles recover while you rest.
- Wear sunscreen: the sun is one of the main causes of skin losing firmness.
- Avoid very restrictive diets: losing weight too fast tends to increase sagging.
