7 MINUTES A DAY

Bye-Bye Bat Wings

7-minute, no-weight workouts to firm the backs of your arms and underarm area.

WALL PILATES · 21-DAY CHALLENGE

Why your arms "wave"

The famous bat wings sit on the back of your upper arm, where your **triceps** are. It's a muscle you rarely use in daily life, and it loses strength and volume over the years. On top of it, your skin loses elasticity and it's common for fat to build up in that area.

Being honest with you: no exercise burns fat from your arms only. Fat comes off your whole body, with the challenge workouts and nutrition. What this guide does is **firm and build the muscle under your skin**, and that's what makes your arms look toned and stop jiggling.

Workout A — Triceps (7 minutes)

40 s work · 20 s rest · 7 exercises

1	Arm circles	40 seconds
2	Close-grip wall push-up (triceps)	40 seconds
3	Backward arm pulses	40 seconds
4	Chair dips	40 seconds
5	Incline wall plank	40 seconds
6	Close-grip wall push-up (triceps)	40 seconds
7	Wall chest stretch	40 seconds

Workout B — Arms and underarms (7 minutes)

40 s work · 20 s rest · 7 exercises

1	Wall angels	40 seconds
2	Towel row	40 seconds
3	Wall push-up	40 seconds
4	Backward arm pulses	40 seconds
5	Standing chest opener (wall swan)	40 seconds
6	Arm circles	40 seconds
7	Wall chest stretch	40 seconds

The towel row and wall angels work your back and underarm area, where bra bulge shows up.

The exercises, step by step

Arm circles

Shoulders · Back of the arms

Position: Standing, arms out at shoulder height and palms facing down.

1. Make small forward circles with your arms straight.
2. Halfway through, reverse to backward circles.
3. Keep your shoulders away from your ears.

Breathing: Breathe rhythmically, without holding your breath.

Avoid: Letting your arms drop below shoulder height. Bending your elbows.

Easier version: Rest your arms for 5 seconds whenever you need to.

Safety: With shoulder pain, make smaller circles with your arms a little lower.

Close-grip wall push-up (triceps)

Triceps | Chest

Position: Facing the wall, an arm's length away, hands on it at chest height and close together.

1. Brace your abs and keep your body straight from head to heels.
2. Bend your elbows back, close to your body, and bring your chest toward the wall.
3. Push the wall and straighten your arms to come back.

Breathing: Inhale as you lower in and exhale as you push.

Avoid: Flaring your elbows out to the sides. Letting your hips drift back.

Easier version: Move your feet closer to the wall.

Safety: With wrist pain, rest on your forearms and just hold a plank.

Backward arm pulses

Triceps | Back of the shoulder

Position: Standing, torso leaning slightly forward, knees soft and arms straight by your sides, palms facing back.

1. Reach your straight arms back as far as you can.
2. Make small up-and-down pulses.
3. Feel the backs of your arms burn.

Breathing: Breathe rhythmically.

Avoid: Bending your elbows. Rounding your back.

Easier version: Do it standing with your torso upright.

Safety: Keep your abs tight to protect your lower back.

Chair dips

Triceps | Shoulders

Position: Sitting on the edge of a sturdy chair against the wall, hands beside your hips with fingers forward and feet on the floor.

1. Lift your hips off the chair, putting your weight on your hands.
2. Bend your elbows back and lower your hips a few inches.
3. Push into the chair and straighten your arms to come up.

Breathing: Inhale as you lower and exhale as you rise.

Avoid: Going too low and straining your shoulder. Flaring your elbows out to the sides.

Easier version: Move your feet closer to the chair and only lower a little.

Safety: Only use a sturdy chair without wheels. With shoulder pain, switch to the close-grip wall push-up.

Towel row

Back | Back of the shoulder | Biceps

Position: Standing, feet hip-width apart, holding a towel taut with both hands in front of your chest.

1. Pull the ends of the towel outward, as if trying to tear it.
2. Keeping the tension, draw your elbows back and squeeze your shoulder blades together.
3. Bring your arms back forward without losing tension on the towel.

Breathing: Exhale as you draw your elbows back.

Avoid: Shrugging your shoulders. Arching your lower back.

Easier version: Go slower and pull the towel less hard.

Safety: Keep your neck relaxed throughout the movement.

Wall push-up

Chest | Triceps | Front deltoid | Core

Position: Facing the wall, an arm's length away, hands at shoulder height and width.

1. Form a straight line from head to heels, abs engaged.
2. Bend your elbows, bringing your chest toward the wall, elbows about 45° from your body.
3. Push the wall away to come back.

Breathing: Inhale as you lower in, exhale as you push.

Avoid: Poking your head forward. Letting your hips stick out back.

Easier version: Move your feet closer to the wall.

Safety: Keep your wrists in line with your elbows.

Pain or limitations in your wrists? Swap for: Incline wall plank.

Wall angels

Middle and lower trapezius | Rhomboids | Chest (stretch)

Position: Standing, back against the wall, feet one step forward, knees slightly bent.

1. Press your hips, back and, if possible, your head against the wall.
2. Bend your elbows to 90° with your arms and backs of your hands on the wall, making a "W".
3. Slide your arms up without losing contact with the wall.
4. Slide back down to the "W", squeezing your shoulder blades together.

Breathing: Inhale as your arms go up, exhale as they come down.

Avoid: Arching your lower back to keep your arms on the wall. Shrugging your shoulders toward your ears.

Easier version: Move your arms a few inches off the wall and reduce the range.

Safety: Stop if you feel tingling in your arms or shoulder pain.

Pain or limitations in your shoulders? Swap for: Wall chest stretch.

Incline wall plank

Transverse abdominis | Rectus abdominis | Shoulders | Glutes

Position: Forearms on the wall at shoulder height, feet away from it.

1. Walk your feet back until your body forms an inclined line.
2. Elbows under shoulders, abs tight and glutes engaged.
3. Hold the position without letting your lower back sag.

Breathing: Steady lateral breathing; don't hold your breath.

Avoid: Hips too high. Shrugged shoulders.

Easier version: Move your feet closer to the wall so you're more upright.

Safety: If you feel it in your lower back, move your feet closer and brace your abs.

4-week plan

Week	What to do	How to progress
1	Alternate Workouts A and B, 5 days a week	30 s work and 30 s rest
2	Alternate Workouts A and B, 5 days a week	40 s work and 20 s rest
3	Alternate Workouts A and B, 6 days a week	Move your feet further from the wall
4	Workout A + B on the same day, 3 days a week	45 s work and 15 s rest

To see results faster

- **Protein at every meal:** it's the building block of muscle.
- **Don't skip the 21-Day Challenge:** it's what helps reduce fat all over your body.
- **Moisturize the skin** on your arms after showering and wear sunscreen when in short sleeves.
- **Posture:** shoulders back instantly makes your arms look slimmer.
- **A well-fitted bra:** tight straps and band create that underarm fold.

Track your progress

Measurement	Day 1	Day 14	Day 28
Right arm (mid-upper arm)			

Measurement	Day 1	Day 14	Day 28
Left arm (mid-upper arm)			
Wall push-ups in a row			

The tank top test

On day 1, take a photo in a tank top, from behind, with your arms out. Repeat on day 28.

Daily checklist

- [ ] I did my arm workout (A or B)
- [ ] Protein at every meal
- [ ] I minded my posture
- [ ] I did my 21-Day Challenge workout
- [ ] I drank water throughout the day
